

AlinIQ

Discover greater operational
productivity with existing resources.

CHOOSE TRANSFORMATION™ / For greater operational productivity, visit AbbottDiagnostics.com/AlinIQ

Today's healthcare challenges are unprecedented. Everything is on the rise, except the resources you need to manage it all. That's why we're committed to improving your lab's operational productivity. And we're confident that we are the partner to help you, because we have a deep understanding of your needs, your challenges and the ever-changing future of healthcare.

Discover greater operational productivity with existing resources.

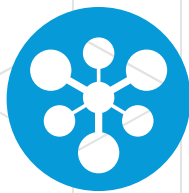

AlinIQ is a first of its kind holistic professional services and informatics portfolio, developed exclusively for the laboratory.

An integrated solution, that combines professional expertise, robust processes and proprietary informatics enablers, to deliver greater operational productivity with existing resources.

EXPERTISE

- Professional Services Executives
- Technical Specialists

PROCESS

ENABLERS

AlinIQ AMS

AlinIQ ALWAYS ON

AlinIQ BIS

AlinIQ IMS

Expertise – Our Professional Services Executives provide intelligent insights and collaboratively develop customized solutions that improve your lab performance.

Process – Applying our robust process, we continuously analyze and monitor your data to uncover actionable insights that can transform your lab's productivity.

Enablers – Based on these insights, we recommend the optimal solution from our suite of four proprietary informatics enablers.

WITH ALINIQ YOU CAN ACCESS A SUITE OF INTEGRATED PROFESSIONAL SERVICES AND PROPRIETARY INFORMATICS ENABLERS:

AlinIQ AMS

Abbott's Analyzer Management System, our expert middleware, is a scalable solution that connects your LIS to any analyzer or automation system, to better manage the flow of data throughout your entire lab process.

AlinIQ ALWAYS ON

Abbott's Always On Services provide predictive, preventive technology that proactively monitors your instruments, keeping you up and running and reducing unexpected downtime.

AlinIQ BIS

Abbott's Business Intelligence System delivers intelligent insights with advisory support to help you improve operations, reduce expenses and communicate value to the broader healthcare organization.

AlinIQ IMS

Abbott's Inventory Management System provides inventory status in real time and streamlines order processing, avoiding shortages of critical items.

Together, these solutions help you look at your enterprise in a whole new light, propelling you ahead of the ever-changing healthcare ecosystem.

BETTER MANAGE THE FLOW OF DATA THROUGHOUT THE ENTIRE LAB SYSTEM

Analyzer Management System

Delivering safe, efficient and patient-centered healthcare requires that you have the best information available at the time of clinical decision making. But when the process to receive critical information across multiple systems or networks is inefficient, it can lead to waste, increased costs and clinical errors.

AlinIQ AMS, Analyzer Management System, Abbott's expert middleware, helps your lab streamline the management of patient orders and test results. With **OPEN CONNECTIVITY**, you can connect your LIS to any analyzer, automation system or point-of-care device, to harmonize and better manage the flow of data throughout the entire lab network.

AlinIQ AMS can help you optimize efficiency and deliver quality results via:

Test Management

Automate and better manage the analysis of patient test orders and results.

Sample Management

Easily manage sample workflow, logistics and archiving for optimized sample processing.

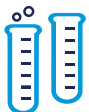

Historical Reports

Better understand and manage lab operational performance through customized reports.

Quality Management

Improve monitoring of assay and instrument quality performance to help ensure accurate results.

Equipment Management

Centralize the monitoring and control of analyzers and automation systems through Command Center.

OPTIMIZE EFFICIENCY BY SOLVING PROBLEMS BEFORE THEY EXIST

Always On Services

For too long, diagnostics service has relied on the lab to find the problem and call for support — after unexpected downtime has already interrupted your work. You need a partner who can work in the opposite direction, by reducing surprises and alerting you of possible issues *before* they happen.

Introducing **AlinIQ Always On Services**, Abbott's proactive, preventive services that deliver predictive alerts enabling the detection of instrument downtime up to three days in advance; so that you can manage service time on your terms: planned, instead of when you can least afford it.

AlinIQ Always On Services identify and prevent potential operational problems in advance via our:

Smart Centers

To maximize instrument uptime, Abbott has created a Smart Center Network, dedicated to constantly monitoring Abbott instruments and proactively scheduling maintenance.

AbbottLink

AbbottLink remote diagnostic connectivity helps drive our AlinIQ Always On Services to proactively ensure your lab's instruments run as efficiently as possible.

Business Reviews

All of Abbott's AlinIQ Always On service plans include regular, thorough business reviews for both operational and executive insights.

INTELLIGENT INSIGHTS TO DRIVE OPERATIONAL PRODUCTIVITY

Business Intelligence System

Today's laboratories face unprecedented changes in the healthcare world. To be successful, labs need an effective strategy and the right tools to analyze their processes and data. Laboratory-wide analytics and their associated insights are critical requirements to ensure continuous performance and quality improvement.

AlinIQ BIS, Business Intelligence System, helps you improve operations, optimize financial performance and communicate your lab's value to the broader healthcare organization. AlinIQ BIS dedicated professionals work with you to analyze your lab's processes and data, and provide intelligent insights utilizing four essential synergistic components:

AlinIQ BIS Dashboard

Quickly view your performance data with in-depth reports and KPIs.

Business Intelligence Workshop

Identify big performance issues and uncover opportunities for improvement with coach-led sessions.

Benchmarking

Compare your performance to peers and identify opportunities for growth with periodic benchmark reports.

Meta-Analysis

View, understand and navigate rapid changes in healthcare with periodic industry reports and Abbott's Expert Advisory support.

OPTIMIZE INVENTORY AND ENSURE PRODUCT AVAILABILITY

Inventory Management System

In today's hospital environment, the cost of inventory management inefficiency can be too great. Optimizing a lab's approach to inventory management is key to delivering quality, uninterrupted services. By discovering more efficient ways to optimize stock levels, laboratories can focus on fast, accurate patient results. That is why Abbott Diagnostics developed AlinIQ IMS specifically for the lab.

AlinIQ IMS, Inventory Management System, is an innovative solution based on Radio Frequency Identification (RFID) technology. AlinIQ IMS is an open system, allowing you to incorporate non-Abbott products into the solution, maximizing your capabilities. Its optimal combination of automated, streamlined and simple-to-use processes minimizes shortages in assays and other consumables to keep your lab running 24/7.

AlinIQ IMS allows you to see and get ahead of every operational need by:

Providing inventory status in real time

Minimizing patient care disruptions due to out-of-stock or expired inventory

Achieving cost savings by reducing hidden losses and operating expenses

Get the solutions to optimize your lab with AlinIQ.
