

**BD™ Cytometric Bead Array (CBA)  
Product List**

For Research Use Only. Not for use in diagnostic or therapeutic procedures.

## Highlights of BD CBA Products

### Reagents with Superior Quality and Reproducibility

All BD CBA products are evaluated for performance characteristics including reproducibility, linearity, spike recovery, and theoretical limit of detection. These values are reported in the product documentation that is included with each BD CBA product.

#### Reproducibility

The intra-assay and inter-assay reproducibility are determined by evaluating ten replicates of three different sample levels (intra-assay) and three replicates of three different sample levels from four different experiments (inter-assay).

#### Linearity

Cell culture supernatant, serum, or EDTA-plasma is spiked with protein and serially diluted. The diluted samples are assayed and the results are compared with the values expected from each dilution.

#### Spike recovery

Cell culture supernatant, serum, or EDTA-plasma is spiked with three different levels of protein. The samples are assayed and the results are compared to the expected values to determine recovery.

#### Theoretical limit of detection

The individual standard curve range for a given cytokine defines the minimum and maximum quantifiable levels using a BD CBA assay. The theoretical limit of detection is defined as the corresponding concentration at two standard deviations above the median fluorescence of 30 replicates of the negative control (0 pg/mL) using a 4- or 5-parameter curve.

### Comparison of BD CBA Standards to the NIBSC/WHO International Standards

The NIBSC protein standards are recognized by the World Health Organization (WHO) as international biological standards. They meet established requirements for accuracy, consistency, and stability. The NIBSC/WHO standards are assigned potency values in International Units (IU) of biological activity and nominal mass (ie, not absolute mass values). Therefore they cannot be used to establish absolute concentrations for a cytokine preparation. However, these standards do provide a means to facilitate comparisons of cytokine concentration values determined by experiments conducted within different laboratories or methods.

The source of a recombinant protein (ie, insect cell, *E. coli*, etc) and the affinity of antibodies used can affect the measurement and performance of a protein in an immunoassay. The conversion factors provided in the subsequent tables make it possible to compare protein concentrations in samples measured by different immunoassays that have been standardized to the same NIBSC/WHO standards.

The conversion factor may change based on the batch of either standard. Therefore, the conversion factor is intended to be a guideline indicating whether a BD CBA assay over- or underestimates analyte concentrations relative to the NIBSC/WHO standards. Researchers are advised to incorporate both sets of standards in their assays if they wish to derive data from the NIBSC/WHO standards.

Titration curve comparing the BD CBA Human IFN- $\gamma$  recombinant standard to the NIBSC/WHO International Standard.

## Highlights of BD CBA Products (continued)

**Table 1. NIBSC conversion factor summary for BD CBA Flex Set Standards**

	NIBSC STANDARD			CALCULATED CONCENTRATION USING BD CBA FLEX SET (PG/ML)	NOMINAL NIBSC CONCENTRATION (PG/ML)	BD CBA FLEX SET: NIBSC/WHO MASS CONVERSION FACTOR

DESCRIPTION	APPS	REG	SIZE	CAT. NO.
Mouse IFN- $\gamma$ Enhanced Sensitivity Flex Set (Bead A4)	FCM	RUO	100 tests	BDB562233
Mouse IL-1 $\beta$ Enhanced Sensitivity Flex Set (Bead B9)	FCM	RUO	100 tests	BDB562278
Mouse IL-2 Enhanced Sensitivity Flex Set (Bead A5)	FCM	RUO	100 tests	BDB562262
Mouse IL-4 Enhanced Sensitivity Flex Set (Bead A7)	FCM	RUO	100 tests	BDB562272
Mouse IL-5 Enhanced Sensitivity Flex Set (Bead A6)	FCM	RUO	100 tests	BDB562234
Mouse IL-6 Enhanced Sensitivity Flex Set (Bead B4)	FCM	RUO	100 tests	BDB562236
Mouse IL-10 Enhanced Sensitivity Flex Set (Bead C4)	FCM	RUO	100 tests	BDB562263
Mouse IL-12 p70 Enhanced Sensitivity Flex Set (Bead D7)	FCM	RUO	100 tests	BDB562264
Mouse IL-13 Enhanced Sensitivity Flex Set (Bead B8)	FCM	RUO	100 tests	BDB562273
Mouse IL-17A Enhanced Sensitivity Flex Set (Bead C5)	FCM	RUO	100 tests	BDB562261
Mouse TNF Enhanced Sensitivity Flex Set (Bead C8)	FCM	RUO	100 tests	BDB562336

### BD CBA Flex Sets

*Soluble Proteins - Rat*

DESCRIPTION	APPS	REG	SIZE	CAT. NO.
Rat IFN- $\gamma$ Flex Set (Bead A6)	FCM	RUO	100 tests	BDB558305
Rat IL-1 $\alpha$ Flex Set (Bead A4)	FCM	RUO	100 tests	BDB560159
Rat IL-2 Flex Set (Bead E5)	FCM	RUO	100 tests	BDB561420
Rat IL-4 Flex Set (Bead B9)	FCM	RUO	100 tests	BDB558307
Rat IL-6 Flex Set (Bead A9)	FCM	RUO	100 tests	BDB558308
Rat IL-10 Flex Set (Bead A8)	FCM	RUO	100 tests	BDB558306
Rat TNF Flex Set (Bead C8)	FCM	RUO	100 tests	BDB558309

### BD CBA Flex Sets

*Soluble Proteins - Supporting Reagents*

DESCRIPTION	APPS	REG	SIZE	CAT. NO.
<b>Human Soluble Protein Master Buffer Kit</b> (Required for use with BD CBA Human Soluble Protein Flex Sets)	FCM	RUO	100 tests	BDB558264
	FCM	RUO	500 tests	BDB558265
<b>Human Enhanced Sensitivity Master Buffer Kit</b> (Required for use with BD CBA Human Enhanced Sensitivity Flex Sets)	FCM	RUO	100 tests	BDB561521
	FCM	RUO	500 tests	BDB561523
<b>Human Immunoglobulin Master Buffer Kit</b> (Required for use with BD CBA Human Ig Flex Sets)	FCM	RUO	100 tests	BDB558683
<b>Mouse/Rat Soluble Protein Master Buffer Kit</b> (Required for use with BD CBA Mouse/Rat Soluble Protein Flex Sets)	FCM	RUO	100 tests	BDB558266
	FCM	RUO	500 tests	BDB558267
<b>Mouse Enhanced Sensitivity Master Buffer Kit</b> (Required for use with BD CBA Mouse Enhanced Sensitivity Flex Sets)	FCM	RUO	100 tests	BDB562246
	FCM	RUO	500 tests	BDB562248
<b>Assay Diluent</b>	FCM	RUO	30 mL	BDB560104
<b>Enhanced Sensitivity Detection Reagent (Part B)</b>	FCM	RUO	1 vial	BDB561519
<b>Wash Buffer</b>	FCM	RUO	130 mL	BDB560105
<b>30 Plex Bead Mixture</b> (Used for verification of instrument setup)	FCM	RUO	1 vial	BDB558522
