

## Custom Education Kits

As a custom kit provider, we partner with organizations from concept to design and delivery. We have the product developers in place to help you think outside the box when determining what goes inside the box. We build kits in quantities ranging from 1 to over 100,000 and there is never a minimum order quantity required.

Our dedicated team works with you throughout the entire curriculum design process. Our in-house chemists, biologists, engineers and education professionals help to select the right products for your unique curriculum. In addition, we'll provide field test samples to be sure the specific activities work as intended, so that once they are implemented in the classroom, assessing student mastery of specific topics is accurate and consistent from year to year.

Our ability to manufacture, custom package, private-label and provide fulfillment services allows us to meet all of your diverse needs. We are a partner with many industry leading educational suppliers. Whether it's STEM, NGSS or state specific curriculum, we will create a product that will meet your needs and the needs of all 21st Century learners.
