Lockout/Tagout Machine Inventory Assessment

The Brady safety team will help you save time and resources by assessing your lockout program and procedures to ensure that your equipment list is up to date and effective.

About

Using Brady's Lockout/Tagout Machine Inventory Assessment, the team will help you create, update, and standardize your lockout equipment list to include items such as the equipment ID number, type of machine, and the number of lockout points.

Once completed, this lockout equipment list provides a high-level asset overview that you can maintain in-house as your facility changes. This list will also help you meet and maintain OSHA compliance requirements, such as the creation of machine-specific lockout procedures.

Key Benefits

The Brady safety team is your partner in creating and maintaining a safety program that's not only compliant but becomes embedded in your safety culture.

- We work with your team to understand the equipment that is within project scope
- After clearly defining your needs, we conduct an on-site visit to collect specific equipment data
- Once data collection is complete, we create your lockout equipment list in a standardized format and provide you with a new lockout inventory spreadsheet
- This spreadsheet can easily be imported into LINK360™ Software to help you create visual lockout procedures and more
